Orthodontics & implant treatments: interdisciplinary approach from simple to complex cases

Mongkol Thaveeprungsiporn

BFC Dental Clinic, Thailand

As we know nowadays that dental treatment patients require their treatment results with the improvement of function and esthetic. With the advancement of academic knowledge and innovations, most compromised orthodontic & prosthodontic treatments can achieve better outcomes with support from micro-implant anchorage and dental implant restorations. Regarding my experiences with Orthodontic and Implant patients in my private practice (www.bfcdental.com), I try to provide the best outcome to my patients as I can in each of these cases. I find that interdisciplinary of Orthodontic & Implant treatments are good tools to create great satisfaction for me and my patients. I would like to share my case presentations which consist of adjunctive orthodontic treatments to conventional orthodontic solutions, single crown implant units to multiple units of implant restoration, and simple cases to complex cases. Hopefully, my topic will benefit the participants
