

A diversity of metabolic syndromes concerning diabetics prediabetics

Ebrahim Satlikh Mohammadi

Hamedan University Iran

Abstract:

DULSUS

To improve education of diabetics & prediabetics and preventative measures along with providing health care & treatment, we need to conduct screening &e-registering. Diversity of metabolic syndromes causing the disease such as Clinical manifestations of metabolic syndrome include the following:

- Hypertension, blood pressure
- Hyperglycemia
- Hypertriglyceridemia [hyperlipidemi]
- Reduced high-density lipoprotein cholesterol (HDL-C) [hyperlipidemi]
- Abdominal obesity [BMI] must be taken seriously.

The research was based on screening of 7600 people out of whom 1500 cases were diagnosed as being diabetics & prediabetics including tables. Charts, and diagram. The task was done by e- registration of people and tracking them over the period of 7 years recording medical history, vital signs, physical examination, lab results, health care and treatment Without the activities cited, it will be hard to develop a plan to control the disease and provide health care. Taking the role and effectiveness of the mentioned factors into account., it is possible to cover the diabetics & prediabetics in a region or city and take preventive measures to manages the disease.
