

A Passion of Healing Starts from Improving the Extensive care to be Implemented

Hythem Al-Sum

Obstetrics-Gynecology is the medical field that incorporates two major fields called Obstetrics and Gynecology. The major role of Obstetrician comprises on childbirth, Pregnancy, Postpartum Period. The major role of gynecologist comprises of women health, female reproductive system majorly on ovaries, breasts, uterus and vagina. Thus, they are commonly called as OB-GYN or OB/GYN. Some Procedures that OB-GYN follows to treat and diagnose patients includes Colposcopy, Endometrial biopsy, Nexplanon, Tubal ligation, Loop electrical excision procedure, IUD insertion, Dilation and curettage, Ovarian cystectomy.

These doctors are preferred because [Gynecology and Obstetrics](#) are wide and a multiple branch of science that includes Gynecologic care, monitoring and care of the pregnant women, oncology, surgery and also primary health care treatments for women. At present 8 in 10 women are advised to undergo cesarean during the time of delivery it's not by the cause of culture development it is because of being negligent and unaware.

To increase standard level of innovation and participation of academic as well as research scholars, Pulsus group is hosting the next edition of the health care conference Women Health Nursing 2020 to deliberate the expertise in the field of Gynecology and obstetrics nursing.
