

A RARE CASE OF GIANT LOWER ABDOMINAL SWELLING DIAGNOSED AS PERITONEAL SIMPLE MESOTHELIAL CYST

Siddharth Jindal

Department of General Surgery, P.D.U. Govt. Medical College and Civil Hospital; Rajkot

Abstract:

A peritoneal simple mesothelial cyst is a very rare mesenteric cyst. Though the lesion being generally asymptomatic, it usually ranges between a few centimeters to 10 cm; however, occasionally it presents with various, non-specific symptoms, which makes correct pre-operative diagnosis difficult. We present a case of a giant peritoneal simple mesothelial cyst that was successfully managed by complete surgical excision without any known intra and post operative surgical complications.
