

A Revolutionary Approach towards Kidney Care

Alena Clancy*

Clancy A. Urinary Tract Infections in Pediatrics. J Kidney Treat Diagn 2020;3(3).

SUMMARY OF KIDNEY CARE CONFERENCE

Kidney Care deals with study of kidneys as well as its illnesses like normal kidney function, kidney problems, the treatment of kidney stone problems and renal replacement therapy, CKD which are common like hemodialysis and kidney transplantation. Kidney function studies: Improved levels of blood urea nitrogen and creatinine are the hallmarks of acute renal failure. Systemic illnesses that affect the kidneys as diabetes and autoimmune disease and systemic complications that occur as a result of kidney problems as renal osteodystrophy and hypertension are also studied in nephrology. A medical doctor who took extra training to become an expert in nephrology may call themselves a nephrologists or renal physician

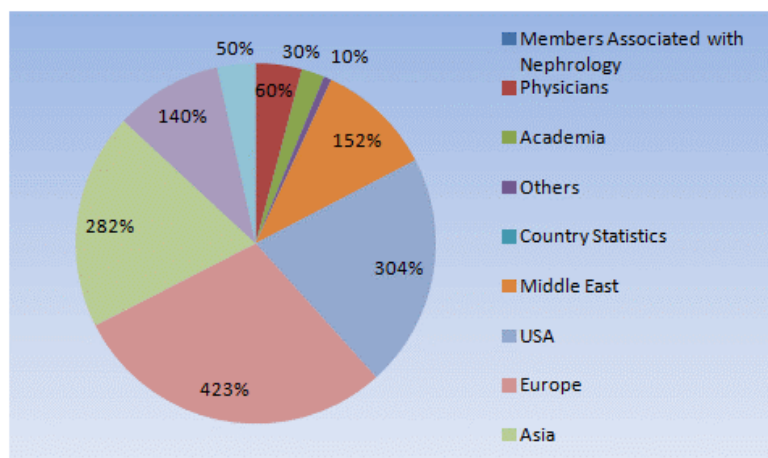

International event on Kidney Failure & Renal Care will discuss the latest skills and therapeutic features developed for various kidney diseases which include renal transplantation, dialysis equipment's and other procedures complicated in treatment of Chronic Kidney Diseases and End Period Renal Diseases. The Kidney care 2020 highlights the theme of "A Revolutionary Approach towards Kidney Care".

Kidney Care 2020 welcomes world class nephrologists and kidney specialists from leading universities and research institutions making the conference a perfect podium to share experience, foster collaboration across industry and academic circles, and evaluate emerging technologies across the world.

According to fresh statistics report, nearly 26 million adults apart from young and old aged individuals are suffering from Chronic Kidney Disease illnesses and millions of others are at increased risk. The totals of Kidney transplantations are apparently very high and, in the year of 2015, alone, there are around 15000 kidney transplantations. Due to the rapid growth for the risk of renal disorders, Kidney Care 2020 aims to decrease the incidence rate of kidney disease through its international conference on nephrology and cordially invites participants across the globe to deliberate and arrive under possible solutions for one of the major critical problems of mankind.

SCOPE AND IMPORTANCE OF NEPHROLOGY RESEARCH

Kidney Care 2020 conference has been fostering the need to control the impact of permanent renal disease within the public health environment. The lack of a systematized regulator provided through a measurable program has greatly impacted on the level of hospital expense since they have improved their case-mix risk, family economies deteriorate and health care pays for a higher morbimortality that could be avoided with better investigation and epidemiological control. Kidney Care 2020 aims to bring together leading Researchers, Academicians, Physicians and Industrialists to exchange and share their skills and research in order to decrease the incidence rate of kidney disease by new methods and latest technologies.
