ANNOUNCEMENT

E-prints: Announcement

Allen Jenner*

ANNOUNCEMENT

We are pleased to announce that, thanks to the tireless efforts of our journal team, as well as the editors' ongoing support and the contributions of reviewers and writers, we are now able to publish regular monthly issues on the journal's website. We are not only limited to the publication of digital issues, but we are also limited to the release of physical issues. We have provided the authors with several reprints (hardcopy/printed copy of the text) of the specific articles/issues/volumes as needed. Unfortunately, due to the pandemic and subsequent lockdown, we were unable to give reproductions to the authors because mobility was banned. It gives me great pleasure to know that everything will resume and reschedule as before, and we will be able to continue our services without any further obstacles.

Reprints of article(s), issue(s), volume(s) and customised reprints (printed copies of selected articles from different issues/volumes as per the authors' request) are available from the Journal of Behavioural Neuroscience. We provide reprints of papers as a gratis, especially for articles that receive a lot of citations. We are pleased to offer you the newly launched E-Print service as an add-on service, which you may use for printing and distribution at a fair rate. E-Prints (Electronic Prints) are digital reproductions of your document in PDF format that are encrypted. E-prints of article(s), issue(s), and volume(s) are available, as well as customised E-prints (in which all selected articles from various issues/volumes are collected in one PDF). We strongly advise you to use the service; you will not be disappointed. Similarly, we provide E-Print services. E-printing is available for both the complete issue and the volume. If you have any questions or would like additional information, please contact us at the address shown below. Furthermore, we encourage editors, reviewers, and authors to provide us with valuable feedback and suggestions about the service. Your feedback will be extremely helpful in improving the journal's assets and amenities.

The Journal of behavioural neuroscience publishes bimonthly issue, and thanks to the efforts of the entire team, we are able to produce all of the issues on time. We're also working on reprints and E-prints, which will be available in two weeks. For more information, please contact us at: evolutionarymed@emedicinejournals.org
