### EDITORIAL NOTE

**N**ursing profession has always stood and emerged as a back bone of delivering quality and effective healthcare. Home care nurses provide home-based look after patients, typically within the sort of follow-up treatment post-discharge from a hospital or other medical aid environment.

Care givers at home plays a very significant role in treatment of residing at home or outside hospital. By not being facility-based, home care nurses get to be self-directed and practice efficient time management.

Whereas quality of effective timing effective recovery of patient depends on home based caregivers affects their health system due to their caregiving

role. They often interact with patients' families within the course of patient care, in order that their clinical proficiency must be matched with strong communication skills and luxury with a breadth of cultures and lifestyles.

Selfcare of care giver and maintenance of their own health with respect to patients health is equally important and highlights the need of nurse led intervention to maintain the quality of life.

Home nursing/family nurse practitioners timely intervention produces positive impact on the quality of life of caregivers. Home health care are often physically demanding and need lifting, turning, or moving patients who need the help .
