

Pulmonology 2021: Identifying the optimal implementation strategy of a wellness curriculum to enhance attendance while transitioning the format due to COVID-19 pandemic in a Pulmonary and Critical Care Medicine Fellowship – Sakshi Dua - United States

Sakshi Dua

Abstract

Rationale: Burnout has been a growing area of concern impacting Pulmonary and Critical Care Medicine (PCCM) physicians both professionally and personally. Junior physicians, including medical fellows, have been identified as a population more at risk of developing burnout due to the stress and demands associated with training. Part of graduate medical education includes developing habits and skills a physician will use throughout their career. Fellowship training presents an ideal opportunity to provide wellness education and facilitate development of adaptive behaviors to cope with stress and decrease burnout. This need has been further emphasized as our trainees worked through a global pandemic which added a new set of stressors.

Methods: Pre-pandemic, a clinical social worker developed a wellness curriculum (WC) consisting of a variety of topics to address the components of burnout: emotional exhaustion, depersonalization, and reduced sense of personal achievement. Over a 4 year period, a WC of 1 hour facilitated discussions was established and trialed at different times, different days of the week, and frequencies (weekly vs biweekly vs monthly) within the PCCM fellowship program at a single institution. These meetings were held indoors in-person (IIP) pre-pandemic. As a result of COVID-19 pandemic, the WC was transitioned by switching the physical setting from IIP gatherings to either outdoor in person socially distant (OIP) gatherings (weather permitting) or virtual meetings online. Attendance was tracked for each wellness session.

Results: Over a 4 year period, pre-pandemic IIP attendance noticeably increased with modifications to time slots, day of the week, and frequency of wellness sessions. We found that: A) Wellness sessions held during lunch hour resulted in the higher attendance and engagement. B) The best day to hold these sessions was one that coincided with fellows' continuity clinic. C) The optimal frequency was monthly (rather than weekly or biweekly). In contrast, after COVID-19 pandemic-related adjustments, we found a significantly lower attendance to any

sessions, whether OIP or virtual online. During the pandemic a slightly higher attendance at OIP sessions was noted compared with virtual online sessions.

Conclusion: Over a 4 year period, pre-pandemic, a WC was developed and adjusted based on the needs of PCCM fellows. We determined that the optimal time, day and frequency of a well-being curriculum was a lunch hour, after fellows' continuity clinic and monthly (rather than weekly or biweekly). However while transitioning the format due to COVID-19 pandemic we noted a sharp decline in overall attendance. Within the new adjustments, we did note a much better attendance at outdoor in-person socially distant meetings compared to virtual online format. Further work will be needed to determine the optimal strategy to enhance fellow attendance to wellness sessions in the "new normal".

Biography:

Dr. Sakshi Dua is a pulmonologist in New York, New York and is affiliated with Mount Sinai Hospital. She received her medical degree from Maulana Azad Medical College and has been in practice between 11-20 years.

Bottom Note: This work is partly presented at 12th International Conference on Pulmonology & Respiratory Research August 27-28, 2021 Amsterdam, Netherlands
