

2nd International Conference on Data Science and Machine Learning 2020 Barcelona, Spain

Lenin Richardson

Lenin Richardson. 2nd International Conference on Data Science and Machine Learning 2020 | Barcelona, Spain. J Pur Appl Math. 2020; 4(2):2:2.

Data Science is a multi-disciplinary field that uses scientific processes, algorithms, methods and systems to excerpt knowledge and insights from structured and unstructured data. Data science follow the concept that explains use the most powerful programming systems, the most powerful hardware, and the most efficient algorithms to solve the problems. Data Science is all about the perception of unifying statics, machine learning and data analysis and their related method in order to analyse actual circumstances with data. Data Science is a multi-disciplinary field that uses scientific processes, algorithms, methods and systems to excerpt knowledge and insights from structured and unstructured data. Data science follow the concept that explains use the most powerful programming systems, the most powerful hardware, and the most efficient algorithms to solve the problems. International Conference on Data Science and Machine Learning welcomes Data Scientists, Data Engineers, Data Analysts, Software developers, Technical leads, Researchers, System Architects, CEOs, CTOs, CIO, Head data Scientists, Head researchers, IT Managers, Entrepreneurs, Business Analysts, Business Strategist's, Consultant from all over the world The Data Science 2020 conference is attended by practitioners across many sectors and disciplines to stay up-to-date on the implementation of machine learning methods and practices today.

The increasing interest and investment in AI will lead to the emergence of new tools for collecting and analysing information/data and new enterprise roles and responsibilities. The main emphasis of this technology is on the development of computer programs that can access data and make appropriate use of it to self-learn. In such computers, the learning phase

starts with assessments or data like examples, experience or instructions. Patterns are identified in all these activities and stored for future use. Many big companies already have started to adopt the Robotics and Artificial Intelligence in their organization. Industry has understood the important of Robotics and Artificial Intelligence in their field for growth of the company. The robotics market is divided under North America, Europe, and Asia Pacific and the rest of the world. Europe precedes the robotics market at the highest usage of industrial robots. The Asia Pacific exhibits the fastest growth in the robotics market, majorly due to the presence of emerging countries like China, Japan, South Korea, and Taiwan. According to resource the robotics market was valued at USD 31.78 billion in 2018 and is expected to register a CAGR of 25% over the forecast period of 2019-2024. In the field of AI, Gartner predicts the business value created by AI will reach \$3.9T in 2022 and IDC predicts worldwide spending on cognitive and Artificial Intelligence systems will reach \$77.6B in 2022.

Conference Highlights:

- 200+ Participation
- 50+ Speakers
- 20+ Exhibitors
- 14 Innovative Educational Sessions
- 5+ Workshops
- B2B Meetings

Harvard University, USA
