

Keratoconus diagnoses, when and how?

Rifay Y

ABSTRACT

Keratoconus is an ectatic corneal disease that touches young population and leads to visual impairment. Its prevalence is 1 in 2000 but surely underdiagnosed because corneal topography and tomography is not spread all over the world. This course will discuss indications of corneal topography and tomography in clinical practice, and when should we suspect keratoconus clinically. It will describe topographic and tomographic features in the diagnosis of keratoconus. The contribution of new technology of OCT based tomography and epithelial mapping in the diagnosis and evolution of corneal ectatic diseases will be presented.

BIOGRAPHY

Rifay Y has completed his PhD at the age of 25 years from Rabat University, Morocco. He is the Director of Dr Rifay Ophthalmology center specialized in refractive surgery and keratoconus in Rabat, Morocco. He has been a guest speaker in many national and international ophthalmology congresses.
