Importance and Scope
French healthcare system is one of the universal healthcare systems that is largely funded by national government health insurance. The World Health Organization found in its 2000 evaluation of world health systems that France provided the "close to the best overall health care" in the world. France spent 11.6% of GDP on health care in 2011, or US$4,086 per capita, a figure much higher than the average countries spent in Europe, but less than in the US. Approximately 77 percent of government-funded agencies cover health expenditures.

Members Associated with Primary Healthcare
Significant challenges are the convergence of community care and primary care or, in other words, the partnership between public health and medical care. Local authorities have a challenge in adjusting their care system to the growing needs of people living in their communities. These needs have not only increased in volume but also in complexity. An effective monitoring system for these local authorities, providing insight into the needs of prevention and health promotion, preventive services for emergencies, continuity of care, chronically ill patients, particularly in the sense of home care, is critical, and ensuring equal resources, taking into account the disparities between the affluent and other parts of the city. Local governments need knowledge, assistance and capacity-building to find practical solutions to these major challenges that lie ahead and become more apparent in the decades to come. The approach to Community-Oriented & Integrated Primary Care is a model that works very well to overcome most of the challenges. Moreover, addressing health problems requires an intersectoral approach at the local level, integrating health and welfare sectors with housing, work, education, and infrastructure.

Market value, Growth &Source of Funds
A rising market segment is demanding unscheduled access to global healthcare services without consideration of health system or pre-existing clinician bond. This inhabitant’s segment has given rise to a new set of "on demand" global healthcare distribution channels. These on demand delivery stations have strong growth forecasts over the next numerous years making a chance or threat for the traditional primary care providers and the health systems.
