

Market Analysis: Gynecology 2020

Manuel

MARKET ANALYSIS

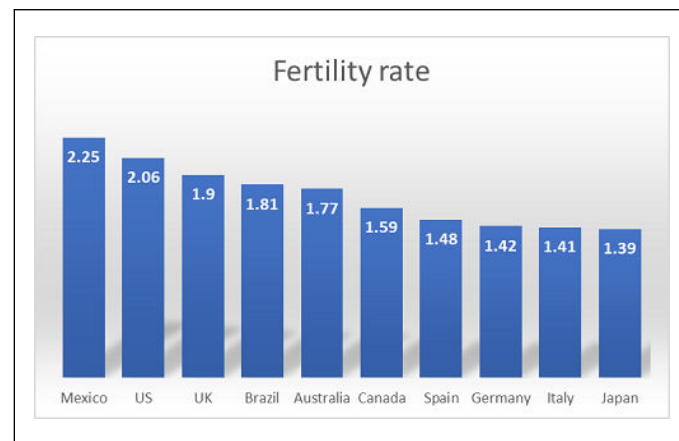

Gynecology is the branch of medical science which focuses on the health and diseases of females. The studies are mainly concerned to the reproductive systems which include ovaries, vagina, and uterus. The physicians who take care of the reproductive systems of women are called the Gynecologists. Physician who delivers babies, an obstetrician

Global Study:

The report from WHO shows that every day, approximately 830 women die from the causes related to pregnancy and childbirth. Deaths in caesarean

sections are 100 times greater in developing countries than the developed countries. The recent report by WHO states that "In sub-Saharan Africa, one in 100 women who has a caesarean section will die - 100 times more than women in the UK". In the past reports, the global maternal mortality ratio is declined only by 2.3%. In 2000-2010, the maternal mortality ratio declination has been accelerated to 5.5% and by 2015 it has been raised to 44%. Between 2016 and 2030, as the part of sustainable developmental goal is to reduce the global maternal mortality ratio to lower than 70 per 100,000 live births.
