

Market Analysis- Parasitology 2020

We are pleased to welcome you to the “7th International conference on Parasitology, Microbiology and Infection Control” after the successful completion of the series of Parasitology, Microbiology and Infection Control Congress. The congress is scheduled to London, UK time zone, on November 16-17, 2020. This PARASITOLOGY 2020 conference will provide you with an exemplary research experience and huge ideas.

The perspective of the PARASITOLOGY 2020 Conference is to set up transplant research to help people understand how treatment techniques have advanced and how the field has developed in recent years.

Conference on Parasitology, Microbiology and Infection Control is an unique and exciting opportunity, have been designed in an interdisciplinary manner with a multitude of tracks to showcase the new technology, the new products of your company, the service your industry may offer to a broad international audience. It covers a lot of topics and it will be a nice platform to showcase their recent researches on Microbiology and Infectious Diseases.

Scope and Importance:

PARASITOLOGY 2020, host presentations from experts across the world in the field of microbiology and anticipates more than 200 participants around the globe with thought provoking Keynote lectures, Oral and Poster presentations. The attending delegates include Editorial Board Members of related international journals.

Business networking is an avenue for vendors to have network and B2B meetings with “Top Scientists and Colleagues” and with an effective low cost marketing method for developing sales and opportunities and contacts, based on referrals and introductions either

face-to-face at meetings and gatherings, or by other contact methods such as Telephone, E mail, Digital and increasingly social and business networking websites.

PARASITOLOGY 2020 could be a stage that licenses the devoted and committed Microbiology experts to investigate their information, their involvement, and their accomplishments in a progressed way. It is to examine modern and inventive Innovations that the Clinical Microbiology and Infectious Diseases field has seen amid later a long time, which is able drive the Microbiology community one standard up. Modern Patterns and innovations in Clinical Microbiology and Infectious Diseases is developing so quick these days, allowing Researchers, the capabilities that they had never thought conceivable indeed fair many a long time back. Presently a day, individuals can anticipate encountering the exceptionally best of what modern-day Microbiology and Microbiology must offer. Nowadays, we have numerous cutting-edge apparatuses in arrange to convey indeed a higher-quality care.

Source of revenue and analysis of the microbiology market:

The global microbiology share value was valued at USD 9.1 billion in 2016 and is supposed to develop at a CAGR of 6.7% over the forecast period. Continuously rising incidence of infectious diseases is the main cause for market growth.

Infectious diseases are majorly diagnosed by using clinical tests. According to the Centres for Disease Control and Prevention (CDC), in 2014, approximately 9,421 new cases of tuberculosis, 51,455 new cases of salmonella and 433 new cases of meningococcal diseases were recognized and in 2017 around 1,688,780 new cases of cancer were diagnosed by the American Cancer Society. Because of increased

generality of infections clinical tests are used as primary identification tool and are expected to constant market growth in future.

Microbiology is a diversified field which is developing as quickly as possible with the time. Clinical Microbiology market share is USD 9.1 billion in 2016 & it is develop at a CAGR of 6.7 % in a predetermined time. The expected market share of microbiology is approximately USD 16.7billion by 2025. As the numbers describing the development and importance of the diversified field i.e. Microbiology.

In recent years, the market for microbiology has seen significant growth directly on the back of the increasing number of procedures for organ transplantation. In addition, an increase in the rate of organ donation and an increase in the prevalence of chronic diseases is expected.
