

Advanced Dentistry 2020: New Global AAP Classification of Periodontal & Peri-Implant Diseases & Conditions - Gabriele Maycher - Canada

Gabriele Maycher

Abstract

Course Description:

It is estimated that 80% of the population has some level of periodontal disease and in knowing that 90% of systemic disease have some oral manifestation it has become apparent that change is needed in the treatment of not just oral but overall health. This workshop explores the changes needed to move away from a solely biofilm-based model to a more holistic inflammation-based model in periodontal therapy. The workshop will bridge the gap between the old & future critical thinking needed to integrate best practices in patient care.

Educational Objectives:

- Distinguish the main changes between the old & new 2017 AAP Periodontal Classification
- Describe the main categories of the 2017 AAP Periodontal Classification
- Recognize the fundamental processes needed to apply the new classification in clinical practice & improve patient outcomes.
- Identify Periodontitis using the staging & grading system to create a periodontal diagnostic statement.
- Recognize the impact of predisposing & modifiable factors on the periodontium.
- Explain current AAP recommendations for determining patient periodontal prognosis
- Review Case Studies to aid in diagnosis formulation
