

## Perineal Urethrostomy - When it is the first choice and what type is better

**Daniel de Almeida Braga**

*Santa Casa de Limeira - São Paulo- Brazil*

### Abstract:

What we see nowadays is the increase of the number of endourology procedures, that are very common in daily urologic practice for treatment of benign prostatic obstruction, stone disease or urothelial tumors, and with expected, increase the number of patients with urethral stricture(1). The management of urethral strictures is variable, according with the location, type, extension of the stricture, health status and previous surgery.
