

8th International Conference on Neuroscience and Neurological Disorders

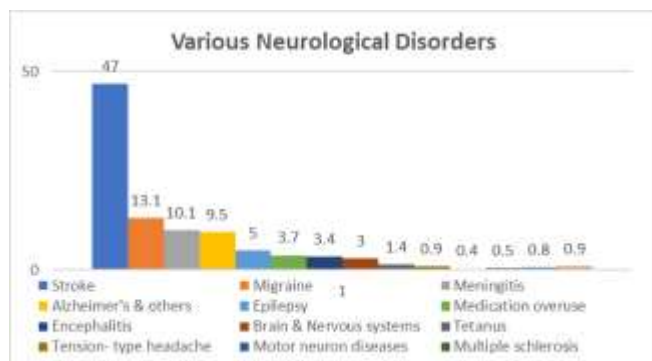

Andrea S. Bonzini

The 8th International Conference on Neuroscience and Neurological Disorders 2020

[Neurological Disorders](#) have aggravated most human beings, ranging from stroke to migraine, usually from Alzheimer's disease. As the World Health Organization reports, about 6.8 million people die of neurological disorders every year. Neurological disorders are reported in Europe at an economic level of around EUR 139 billion in 2004.

The [neuroscience](#) industry's global demand for 2013 amounted to USD 24,09 billion, and by 2020 is expected to reach over \$30,80 billion. The key factors driving business success are rising R&D investments, contributing to the rise of the number of neuro-informatics devices, together with appropriate government funds.

The immense growth on the international neurological equipment market shows rising instances of cortical dementia, acute and chronic diseases, such as Parkinson's disease, Huntington's, Epilepsy, Alzheimer's disease and movement disorders, Ataxia, multiple sclerosis and brain disease.
